eCommerce Industry Outlook 2015

● Introduction

At Criteo, we expect 2015 will be another exciting year for the eCommerce industry as mobile shopping accelerates and consumers continue to browse and shop across multiple devices. Working with thousands of advertisers and publishers, we see billions of online transactions, providing us unique insights into online shopping behaviour and emerging trends.

Here are our top predictions of what advertisers can expect – and must prepare for – in 2015

- 1. Mobile share will grow to 40% of eCommerce transactions globally**
- 2. Cross-device marketing will be real and drive significant value for advertisers**
- 3. Programmatic buying will drive rapid growth in native advertising**
- 4. Brick-and-mortar retailers will focus even more on online strategies**
- 5. Mobile apps focus will shift to re-engagement**
- 6. Automated ad formats will offer even greater flexibility**
- 7. Acquisitions and consolidation will continue to intensify in the ad-tech industry**

Eric Eichmann,
President and COO

#1. Mobile share will grow to 40% of eCommerce transactions globally

Source: Criteo

Mobile share of online sales grew steadily in 2014. This year we expect mobile devices to account for 40% of eCommerce transactions globally, and more than 50% in the developed markets including the US, UK and Japan.

Much of the early user pain of mobile purchases is quickly fading away with the growing deployment of HTML and mobile optimized websites. In addition, new mobile payment services, particularly Apple Pay will accelerate consumer willingness to make purchases via their mobile phones in 2015.

Implication - As mobile share of eCommerce transactions grows, mobile will also attract greater share of digital ad spending and advertisers will allocate a bigger portion of their marketing budgets to mobile campaigns.

#2. In 2015, cross-device marketing will be real and drive significant value

Marketers know that consumers are increasingly taking a multi-device path to purchase, but it has been difficult to tell if the person who saw an ad on a smartphone and later made the purchase on a tablet was the same user or a new customer.

In 2015, the complexities around cross-device advertising will disappear with the availability of more precise exact-match methods, which will drive a significant uplift in sales for retailers.

Implication – With cross-device advertising, retailers will be able to differentiate between existing users and new prospects and better understand their shopping behavior across desktops, tablets, and smartphones. They will be able to deliver personalized ads to users across devices with accuracy and scale. This will further boost advertiser confidence and investment in performance display marketing.

What would you like most for your mobile marketing efforts?

#3. Programmatic buying will drive rapid growth in native advertising

Reasons that Digital Ad Buyers Worldwide Plan/Run Mobile Native Ad Campaigns, Oct 2014

Note: among those who are currently planning/running mobile native ad campaigns

Source: Rubicon Project and InMobi. "2014 Mobile Native Advertising Survey" Oct 16, 2014

In 2015, native ads will become every bit as scalable and measurable as IAB standard ad units - and therefore native ad inventory will grow significantly.

An increasing number of technology providers are now offering services to publishers to help them integrate native ads that look consistent with their website or mobile app, in the exact same way Facebook sells its 'News Feed' ads. This will start to happen at scale in 2015 using technologies that build ads on the fly, and driven by demand generated through programmatic buying.

Implication - With programmatic buying, native ads implementation will become a lot easier than it used to be. Also, publishers will be able to charge higher CPMs as native ads perform better than IAB standard ad units, especially on mobile.

#4. Brick-and-mortar retailers will focus even more on online strategies

eCommerce will become 'do or die' for brick-and-mortar retailers in 2015 as they experience the increasing impact of shopper "webrooming" and "showrooming" behavior.

At least 10-15% of in-store sales can be directly attributed to webrooming - shoppers gathering product information online and then going to the store to make the purchase. Similarly, there's a contrasting showrooming trend with many shoppers visiting the store to find, try, and gather information on the products and eventually buying online.

Implication - Webrooming is emerging as a stronger trend than showrooming and many brick-and-mortar retailers will start deploying beacons, tablets and offer free Wi-Fi in their stores to further accelerate this trend in 2015. This will help them in establishing more touch points with consumers and gain insights on how they can engage with customers before they enter the store, in the store, and after they leave the store.

#5. Mobile apps focus will shift to re-engagement

What is the Primary Goal of Your Mobile App Strategy?

Source: Digiday and Criteo survey of retail executives and ad agencies, July 2014

Whilst app installs will continue to be important in 2015, mobile app marketers will start to focus more on re-engaging with users that have previously installed the app but are not using it.

Majority of downloaded mobile apps are not actively used, e.g. Criteo data for travel apps shows that only 25.8% of app installs result in someone actually using the app.

Implication - Greater share of mobile app marketing budgets in 2015 will be spent on promoting the app to inactive installers, and to re-engage with lapsed users. Retailers who until now focused heavily on increasing their app installed bases, will pay more attention to improving app usage and re-visits from existing users.

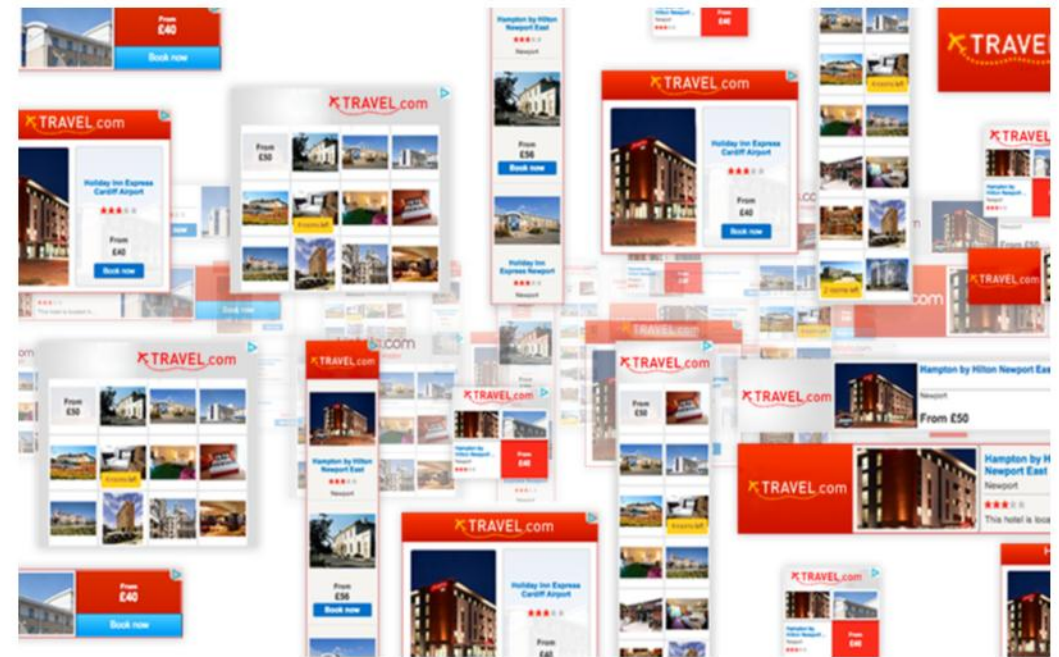

#6. Automated ad formats will offer even greater flexibility

Thanks to the rise of new technologies such as adaptive, 'liquid' and responsive design, a single set of creatives can now accommodate literally thousands of different ad formats - with elements inside the banners automatically re-sizing and re-ordering themselves in order to fit and reflect the most effective ad for that consumer.

In the past, advertisers had to choose between scalability and access to inventory. And, preference for scalability meant missing out on all ad formats that did not meet IAB standards. The need for ad format changes is also driven by users shifting their media consumption to mobile, especially the mobile in-app environment.

Implication - This technological shift will allow advertisers to effortlessly access a significantly greater part of the inventory available around the world and make it a lot easier to scale campaigns internationally. For publishers, this change is synonymous with more freedom to innovate and offer new ad formats.

#7. Acquisitions and consolidation will continue to intensify in the ad-tech industry

2014 saw a number of big acquisitions including that of TapCommerce by Twitter, Flurry by Yahoo, LiveRail by Facebook, and Conversant by Alliance Data

In 2014 we saw a number of big acquisitions including that of TapCommerce by Twitter, Flurry by Yahoo, LiveRail by Facebook, and Conversant by Alliance Data. Consolidation in the ad-tech space will continue in 2015, driven by advertisers' demands for global scale and comprehensive solutions.

Meanwhile, the network effects of first movers with solid business models will help them gain commercial and technological strength that in turn will enable them to use acquisitions to increase their talent, innovative technology and coverage.

Implication - This consolidation will make it simpler for ecommerce marketers to identify marketing solutions that meet their objectives. . Marketers will be able to access and use actionable data in huge volumes to optimize marketing spend across different channels globally through more comprehensive solutions from fewer partners.

● Key Takeaways

- Advertisers that focus on conversion and sales will get better results from their online campaigns than those using broad audience reach metrics.
- Retailers investing in mobile and cross-device targeting solutions will achieve a significant boost in sales at the same cost. They will also benefit at the expense of competitors who are slow to embrace mobile and performance marketing.
- With growing opportunities to sell internationally, eCommerce companies should partner with technology companies that can enable them to run online ad campaigns with rich targeting and optimization capabilities at a truly global scale.
- Cross-device advertising will allow retailers to identify a consumer reaching them via multiple devices as a unique user, and to differentiate between a customer or a prospect. This insight will enable retailers to deliver relevant messages and optimize ad spending for engagement with existing customers, and for acquiring new customers.
