Mobile Commerce Trends in Brazil

● Executive Summary

Consumer mobile behavior continues to advance faster than retailers' ability to keep up.

- **Mobile transactions in Brazil cross 13% share:** And it's much higher for top quartile retailers.
- **Apps generated almost 50% of mobile transactions for retailers* who have made their app experience a priority:** Mobile apps perform better than any other channel, including desktop.

These trends and forecasts come from Criteo's Q2 2015 State of Mobile Commerce Report, based on its unique pool of online shopping data covering 1.4 billion transactions totaling over \$160 billion of annual sales. Mobile Commerce in this report excludes NFC/proximity payments.

* Retailers that have over 25% of eCommerce transactions on mobile. Of those mobile transactions, more than 10% are from mobile apps and the rest from mobile browsers.

#1

mCommerce in Brazil
passes 13%, top quartile
at 25%

● The growth continues: Brazil mobile commerce passed 13% share this quarter

Mobile Share of eCommerce Transactions

- In Q2, mobile accounts for 13.5% of eCommerce transactions.
- Mobile share of eCommerce transactions for the top quartile retailers is at 25.3% in Q2.

● Mobile now significant for all retail categories

Mobile Share of eCommerce Transactions, by Category

- 1 in 5 transactions Health & Beauty and Home categories are now on mobile
- Sporting Goods and Fashion & Luxury are categories to watch as they are seeing consistent growth with smartphone adoption.
- The Health & Beauty category has historically been slow-performing, but is now growing rapidly.

Smartphones continue to displace tablets in Brazil

Smartphone vs. Tablet Share of Mobile Transactions

- The majority of mobile transactions come from smartphones, increasing to 73% this quarter.
- Even though the conversion rates on smartphone are lower than desktop or tablet, smartphones generate more transactions due to significantly higher traffic.
- With the introduction of larger screen-sizes, such as with the iPhone 6 and Samsung Galaxy, consumers are finding smartphones a convenient way to complete purchases.

● iPhone accounts for a quarter of all transactions in Brazil

iPhone Share of Smartphone Transactions

- iPhone makes up a quarter of smartphone transactions, down from 27.9% from the last quarters.
- Android is gaining ground on the iPhone in Brazil

#2

This is why you want
an app

- Many retailers who have made their app experience a priority* see half of their mobile transactions on apps

App vs. Mobile Browser Share of Mobile Transactions

- Retailers who have prioritized their mobile app as a key revenue driver see significant share of transactions via their app.
- For these retailers, apps generate 47% of all mobile revenue.
- Apps are significant for last-minute travel bookings. 42% of mobile transactions come through apps for committed app businesses.

* Retailers that have over 25% of eCommerce transactions on mobile. Of those mobile transactions, more than 10% are from mobile apps and the rest from mobile browsers.

● Done right, apps convert visits to sales better than the desktop site

Mobile Retail* Conversion Rates

- Apps convert at a higher rate. Partly, this indicates that the user experience of apps is better than desktop and browser. It also reflects the fact that apps are used by more loyal customers, leading to higher conversion rates.
- In retail, consumers using the app convert at a rate three times higher than those using a mobile browser.
- With travel, the conversion rate for apps is almost two times that of mobile browser.

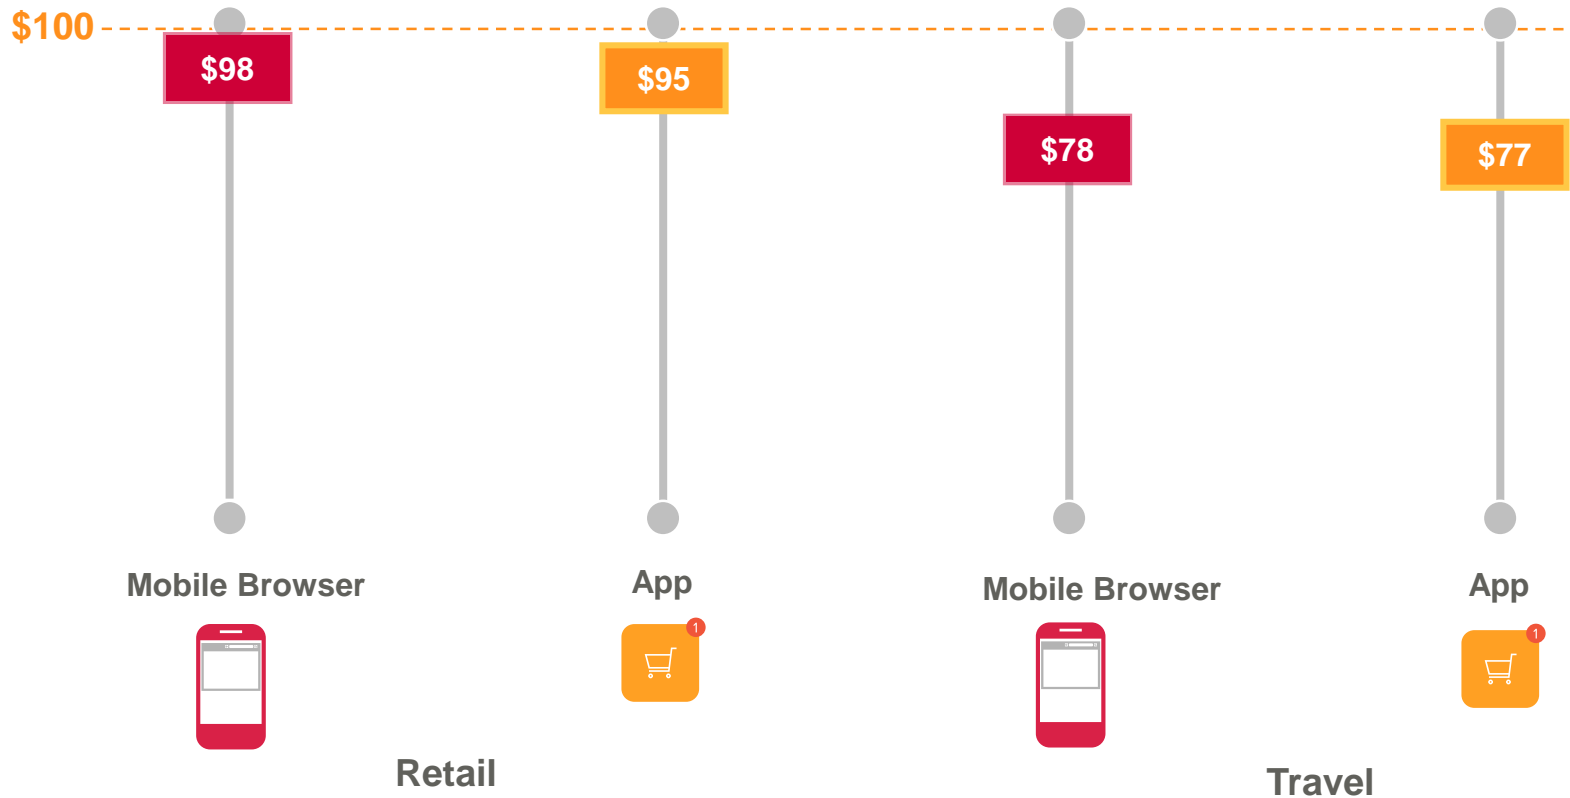

* Retailers that have over 25% of eCommerce transactions on mobile. Of those mobile transactions, more than 10% are from mobile apps and the rest from mobile browsers.

● Apps deliver higher conversion rates because they provide a much better product browsing experience

● App spend per transaction is the same as mobile browser

Mobile Order Values Compared to \$100 Spent on the Desktop for Committed App Retailers*

- In retail, the average order values on app, mobile browser and desktop are almost the same.
- Mobile order value in the travel category is lower than desktop, as mobile is used for last-minute, lower-cost purchases, such as same-day hotels. Average order values on mobile browsers and apps are very similar.

* A committed app retailer is a retailer that is live on both mobile web and app, that is for which more than 10 clicks are logged on each environment.

Global Mobile Commerce Trends

● Asia and UK continue to be the mobile leaders globally

Mobile Share of Retail eCommerce Transactions

- mCommerce is now 34% of all eCommerce transactions globally – based on an accurate weighting of eCommerce market size by country.
- The U.S. is catching up with the global average, with 30% of eCommerce transactions coming from mobile devices.
- Growth rates are slower in Q2 as the holiday effect of new smartphone sales wears off.

Worldwide, consumers are using more than one device before they purchase

Cross-Device Share of Retail eCommerce Transactions*

- Cross-device purchasing doesn't just happen in the U.S. In fact, levels are even higher in other markets.
- Asian markets see high levels of cross-device usage even though the phone is so heavily used in these countries.

* Where the consumer has more than one device. Based on Criteo's Universal Match product providing exact matches of users across multiple devices.

Smartphone is the dominant device worldwide

Smartphone and Tablet Share of Retail eCommerce Transactions

- Across the globe, smartphones have a higher share of mobile transactions than tablets.
- Japan and South Korea see more than 40% of eCommerce transactions from smartphones.
- Tablets are still a bit bigger than phones in the UK, Germany, France, Netherlands and Russia. But globally smartphone share is much higher than tablet.

Android smartphone is bigger than iPhone in many countries

Android Smartphone and iPhone Share of Retail eCommerce Transactions

- Android delivers a significant share of smartphone transactions across the globe, greater than iPhone in most countries.
- Share of transactions from iPhone is significantly higher than Android only in the U.S., UK and Japan.

● UK leads the West in conversion rates, but still behind Asia

Retail Mobile Conversion Rates Compared to the U.S.
(Benchmarked at 100)

- The UK has a higher conversion rate than other Western countries, due to better usability and consumer experience on mobile websites.
- Mobile conversion rates in Japan are more than three times higher than in the U.S.

Conversion Rate = (No. of Sales) / (No. of Users)

Users include those with more than a single event on the websites.

Each time a visitor sees a web page, adds a product to the basket, or makes an online payment, etc., it is counted as an event.

What will the
future look
like?

● So what does the future hold?

We see four big trends:

- **Growth in mCommerce is unstoppable.** By year-end, mobile share of eCommerce transactions is forecast to reach 40% globally.
- **Smartphones will continue to displace slower-growing tablets due to larger available screens.** Apple is gaining ground on Android, but both are winners vs. a shrinking desktop.
- **Apps are the next frontier:** Advertisers will start to significantly invest in their mobile app as a way to drive more conversions than desktop and engage with their loyal customers.
- **Dealing with cross-device behavior is the biggest challenge and opportunity for marketers in 2015.** With 40% of sales already cross-device, marketers have to talk to users and no longer to devices.
